## IPS e.max CAD

### Glass-ceramic CAD/CAM restorations

IPS e.max CAD is an aesthetic, innovative system from Ivoclar Vivadent. IPS e.max CAD matches the aesthetic qualities of traditional pressed e.max while also giving all the advantages of CAD/CAM manufacture.

#### Monolithic CAD/CAM Technology

E.max CAD is monolithic for optimum strength. This also results in good marginal integrity and minimises issues such as delamination. An IPS e.max CAD crown is designed digitally and precision-milled, giving excellent consistency and fit.

#### Strength and Beauty

IPS e.max CAD utilises lithium disilicate, the same material as pressed IPS e.max. The material exhibits exceptional translucency and a reliable strength of 360MPa. IPS e.max CAD is available in three levels of translucency and a range of standard shades. Custom shading is also available.

Race Dental currently offers IPS e.max CAD as single-unit crowns. The availability of  $\frac{3}{4}$  crowns, veneers, inlay and onlays is anticipated in the near future.

#### Validated by Ivoclar Vivadent

Our IPS e.max CAD is manufactured by a milling centre that is fully validated by Ivoclar Vivadent, ensuring that the finished product meets the highest standards of quality. Race Dental Laboratory offers a 1-year warranty for IPS e.max CAD.
