

## Chrome Casting

*Exceptional turnaround times*

With almost 75 years' experience in the dental industry, Race Dental Laboratory has the knowledge and skills to provide quality chrome and acrylic work. Our trained technicians use high-tensile-strength, TGA-approved chrome cobalt and utilise the latest techniques.

We can provide masking for anterior pins and backings to enhance the natural colour of the teeth and make the restoration less visible. We also offer Dental D clasps for maximum aesthetic benefit.

### Dental D

Dental D is an aesthetic, metal-free alternative to metal clasps. Manufactured from acetyl resin, an array of tooth and tissue-coloured finishes are available to help the restoration blend in with natural dentition. Dental D is strong and resilient, allowing the clasp to flex over extreme undercuts while still providing a comfortable fit.

Dental D clasps may also be used on existing metal partial dentures for an aesthetically enhanced, yet highly functional, result.

### 5-Day Turnaround

We understand the unique needs of today's dental practices and offer the convenience of a 5 lab-day turnaround on our chrome partial work.
