

Standard PFM Restorations

The time-tested traditional solution

Porcelain fused to metal (PFM) crowns and bridges are the traditional style of restoration that has been tried and tested for decades. They offer strength, reliability, aesthetics, good marginal fit and are great value for money.

Our standard PFM restoration is both effective and economical. It offers standard options with certain optional extras such as attachments and a fit to denture service. A standard crown consists of a two-layer build of dentine and enamel with no internal effects and is suitable for all restorations in the mouth.

Benefits of a Standard PFM

- A number of margin options
- Attention to contour, occlusion, contacts and emergence profile
- A Standard Vita Classical shade of your choice
- 5 x microscope fit for good accuracy

High-Quality Materials

All of our PFM crowns use biocompatible alloys and the finest feldspathic porcelain systems available to ensure the most attractive and natural aesthetics. These porcelain systems provide secure bonding strength and are gentle on the mouth area.

Different types of alloys are available:

- Cast precious yellow gold
- Cast semi-precious gold (silver-coloured)
