

ShadeVision

Customised shade-taking service

Easy, Reliable Shade-Matching

For years, one of the most difficult aspects of achieving aesthetic crown and bridge work has been the struggle to select the correct shade.

ShadeVision is an outstanding high-tech shade taking device which assigns shades based on the most popular industry guides. Unlike digital cameras, ShadeVision provides a consistent, calibrated light source, which allows for the capture of reliable colour information (including value, hue & chroma) to ensure that each dental restoration matches the surrounding teeth.

ShadeVision technology is integrated into our lab processes, so that tooth images taken of the patient can be used to check the accuracy of a restoration during the production stage.

We Visit Your Practice

For customers who don't already own a ShadeVision system, one of our specially trained staff members can visit your practice to take a shade for your patients. This procedure typically takes 30 minutes or less and is available to most customers within the Sydney area. **The callout fee for this service is waived for bookings which are made four working days in advance.***

How to Book

To organise a ShadeVision custom shade for one of your patients, **call us on 1300 722 352** and an appointment will be made for one of our staff to visit you in your surgery. Please ensure that any patient bleaching has been completed two weeks prior to a custom shade appointment.

ShadeVision is available for our premium crowns only, including: premium PFM, 3M ESPE Lava and E.max crowns and veneers. Appointments are available Monday to Friday.

*This offer is subject to our discretion and may change without prior notice. Minimum four working days' notice required, appointments are subject to availability. Please contact us to confirm you are eligible for this offer.
