

THE IDEAL PACKAGING INSTRUCTIONS

1 Place bubble wrap between articulated models.

2 Wrap model individually. Articulated models can be wrapped as a whole.

3 Once all parts are protected, secure bubble wrap with sticky tape.

4 Place wrapped models in a Zip-Lock bag

5 Place a piece of foam in the bottom of the box

6 Place models on top of the foam, add more bubble wrap to prevent movement

7 Finally, add another piece of foam and securely lock the lid down

TIPS

Each job we send out is wrapped in bubble wrap and placed in a Zip-Lock bag. Retain these materials and re-use them rather than having to purchase your own.

⚠️ AVOID

Models sent without protection will often result in models moving around during transport, causing teeth to be chipped off or models broken in half.

⚠️ AVOID

Even models packed loosely with one or two pieces of foam are likely to move in transit and bump together, chipping off parts of teeth.
